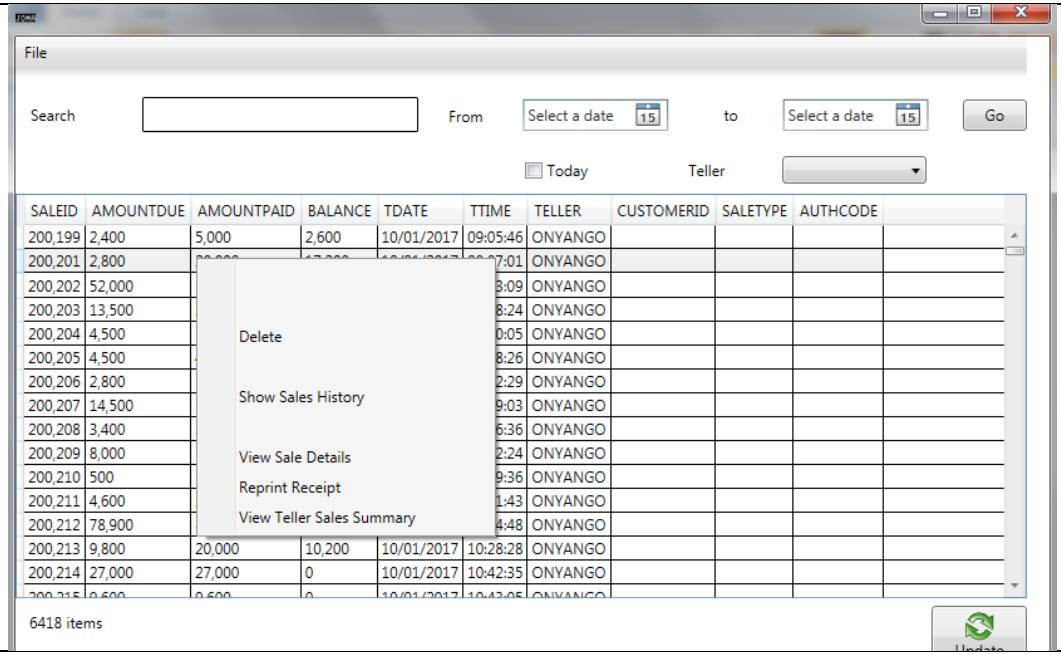
#	DESCRIPTION OF PROBLEM	COMMENTS*FROM CLIENT*	COMMENTS *FROM VENDOR*
1	Discount Function	When a level 3 user enters password, the application doesn't login	**Fixed in version 6.1** An added feature is a log of who logged in using whose password. You can now tell if a password was shared.
2	I can delete a receipt	I've succeeded to delete receipt number 200200!  **Kindly disable this function from this window.**	**Fixed in version 6.1**

3	Sales Window	Since we have “other fuel stations other than shell let us not call Total Shell”. Let F6 be **Card Payments, NOT Visa Payments.**	**Fixed in version 6.1**
4	Card Payments	I would like us to be able to isolate card payments at the end of the day. Currently, when a card is swiped, we treat it as expenditure when we count moneys at the end of the shift. Since we don’t give cashback, why don’t we implement it in a way that a receipt prints and a sale is added successfully, when Authorisation Code is punched in? Then, the Card Payment amounts should be able to reflect separately on cashier’s Summary. That will help us in conclusion at the end of the shift.	**Fixed in version 6.1** Because of rarity and complication of design, Mixed cash and card payments should be treated as card payments.
5	Alerts	Alerts seem to only show low stock. Has it completely excluded expiry date? I would wish both to appear. My challenge last time, in the last bug report was the fact that some items showed low stock, leaving out expiry date, even when expiry was running low. Currently, all alerts show expired dates of items whose stock is at 0. Is there a way to show all alerts (stock quantities, expiry reminder) about the item at the same time? For example, how about we showed expiry, based on quantity remaining in stock? If for example there are items more than 20, with a less than 30 days to expire, they should be given priority on alerts.	**Fixed in version 6.1.** All expiry dates between 365 days ago and 60 days in future (you can change the future warn level in settings) are shown with quantities. You can adjust the low stock alert level in settings. The application will return all items

			with quantities ABOVE the low stock alert level. To return all quantities therefore, set this option to 0.
6	Admin >> Back Up	I'm no longer able to backup from "anywhere in the world" 	**Fixed in version 6.1** This was a debug function just for me, but the solution is to run the app with admin privileges.
