

JOMA SUPERMARKET LTD version 2.2 Bugs Log

NO	DESCRIPTION OF PROBLEM (Mention the procedure that leads to the error or simply an issue that should be fixed) <i>Example: When adding more than 1 item in a sale, the price is inaccurate</i>	WINDOW (the name of the window in question) <i>Add Sale</i>	COMMENTS <i>Please test with cocacola 300ml</i>
1	There are times when a customer decides to leave a commodity out at the till; maybe the money he/she has is not enough to pay the bill. However, it's not possible to remove the commodity already selected to the sales window just before the receipt can be printed.	Sales Window	The cashier should be able to erase the selected commodity from the sales window if the customer decides to leave it out.
2	When one scans a commodity, insert the quantity and press enter, the cursor remains in the quantity box. Is there a way we can always make sure it goes back to the Item Name?	Sales window	Clearing back to the Item Name would help speed up work, as one just drags and scans without having to click back into the box.
3	I have failed to get use for ADD STOCK function. Is it the one to use while making brandy-new purchases or it's for updating inventory?	Add Stock	I've failed to find its use. Lol
4	Category AGAIN. Inventory window, is there any way to select categories from the inventory window, like a drop down on every row of goods in stock?	Inventory	Having to enter Categories creates duplicates. If I wrote ALCOHOL & GINS and the other one ALCOHOL&GINS, we would mean the same, but we would create a "new" category in the system

5	Now, there is a new behavior. ALERTS WINDOW. It's been working normally, but today, opening it was displaying a blank page. Updating it by click of a button has been crushing the system	Alerts	I don't know if it's been overwhelmed with too many alerts
